Introduction

Storyline

- Our heroine, Rin, in the confusion of adulthood, falls into a maze woven by her subconscious mind after a noon nap.
 - She must pass through the deep forest symbolizing fear and the shattered starry sky in a limited time dream before sunrise, collecting fragments of lost childhood memories.
- 
- 
- 

Our Map System

- Three maps, corresponding to dark forest, sparse forest, sunrise lake
- More maps are on the way...

Objective

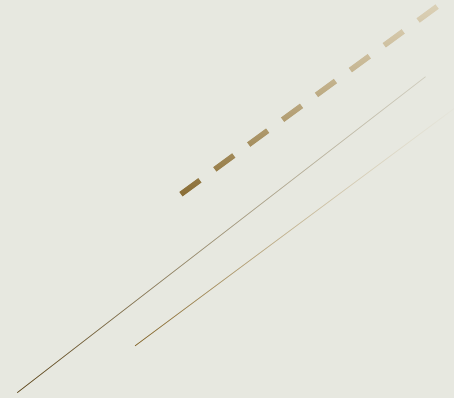

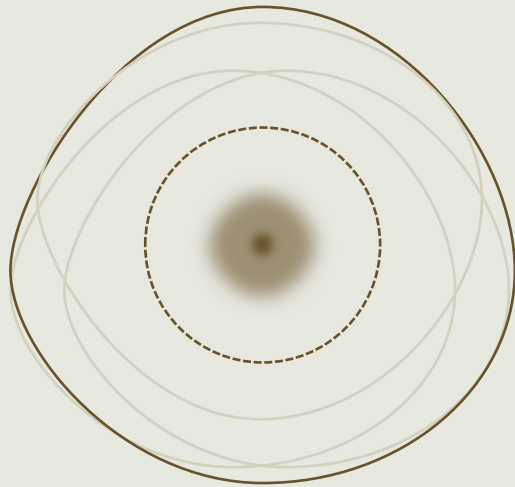

- Find the pieces, and see yourself
- If you die, play from the start ><
- There may be a lot of obstacles blocking your way. Use your wisdom to figure out the solution

Characters and items

- Main Character: Our heroine Rin
- There are also guardians whom Rin cannot touch
- Our items include:
 - Huge pits, die if jumping into them
 - Sharp spikes, die if touching
 - Ladder, with it the heroine can get upward or downward during the map
 - Branches, on which our heroine can go
 - Stele, provide some useful hints

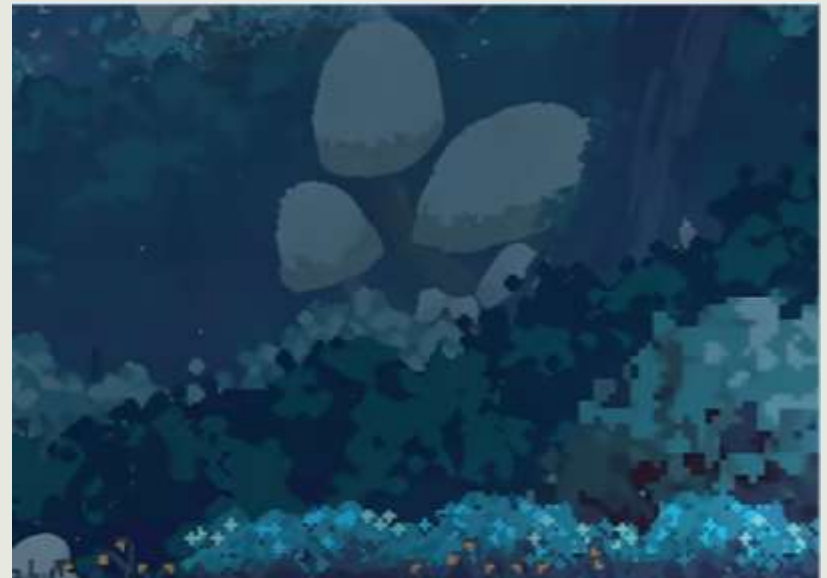

UI Design

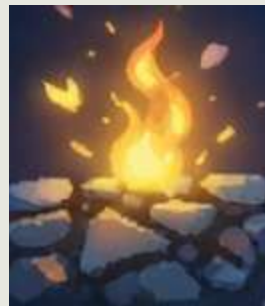

Beyond What You See: A Three-Layered Forest Realm

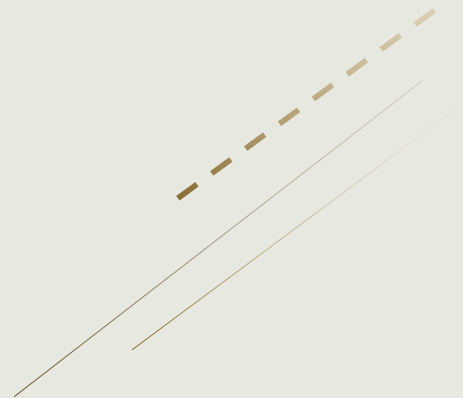

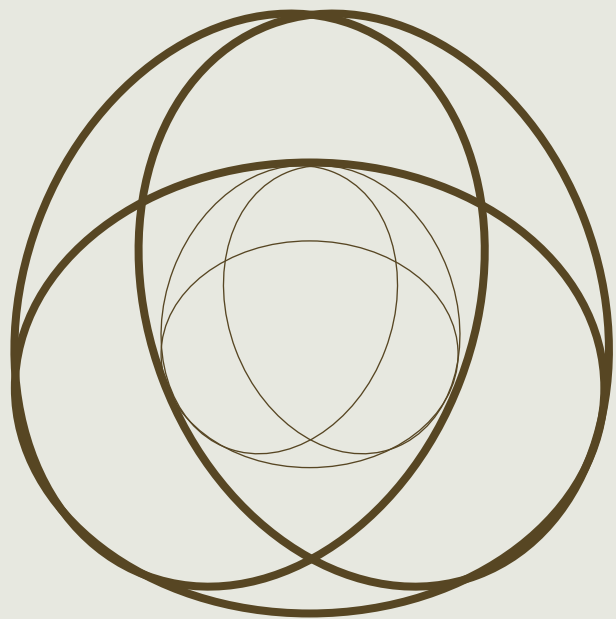

A Forest of Hidden Depths

Part 1: Scene Showcase (Deep Forest)

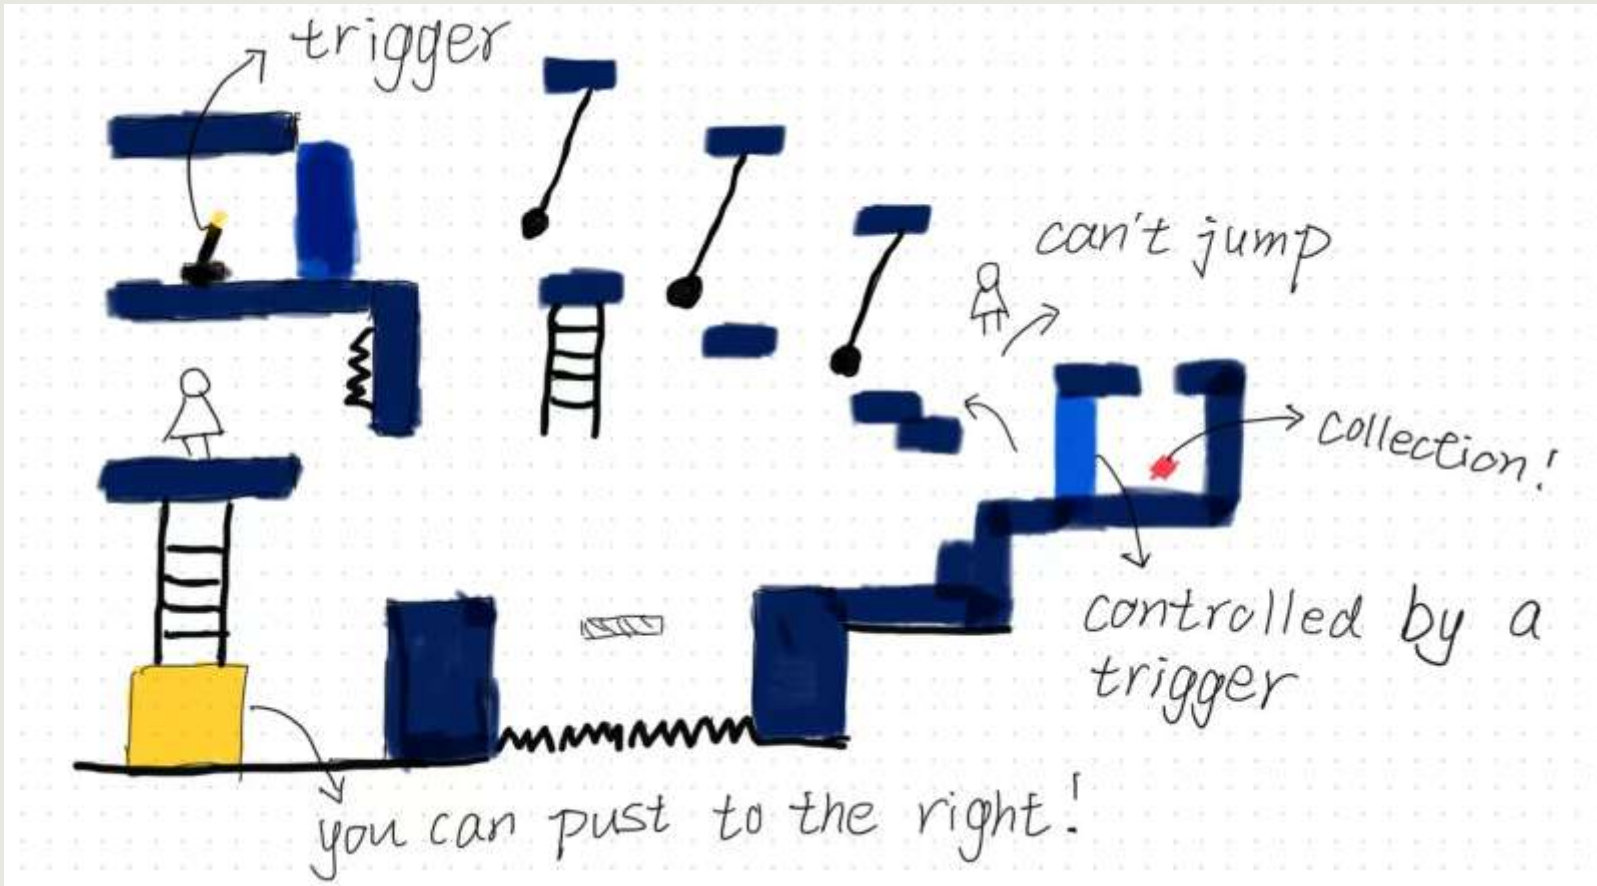

Asset Showcase

Game Level

Overview

Our philosophy:

Not:
Exciting
Battle
Complexity

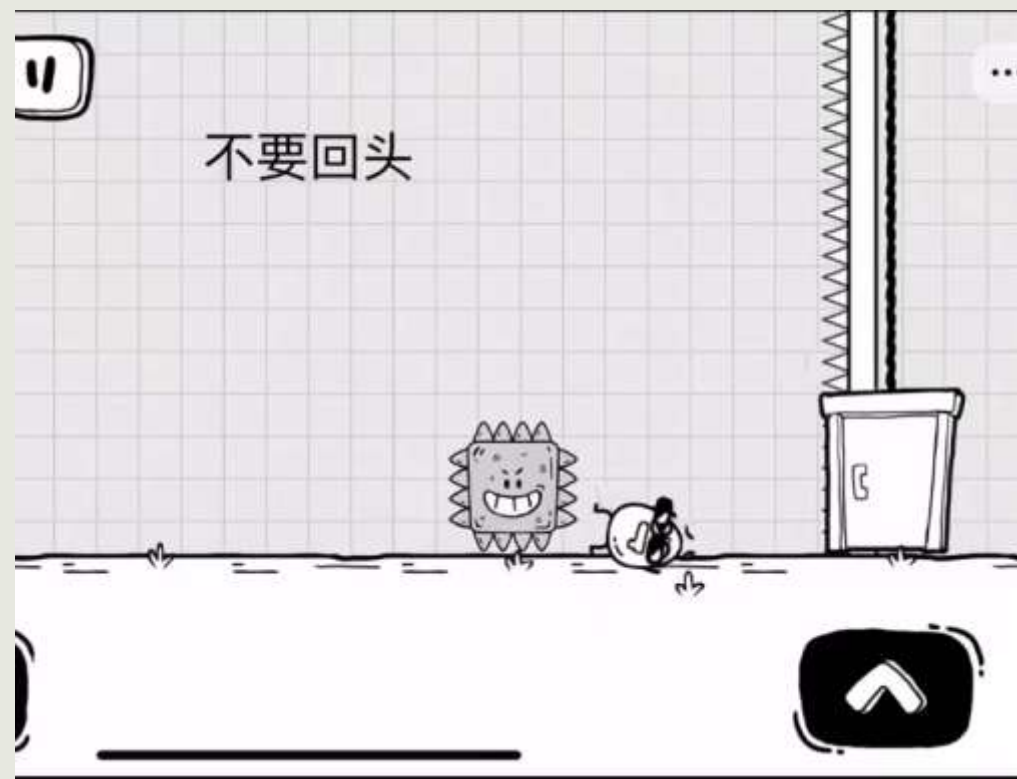

.....

But:
Idea
Aesthetics
Narrative

.....

Growth is a journey of breaking bounds.

Unconventional hidden details.

Wandering between yesterday and now

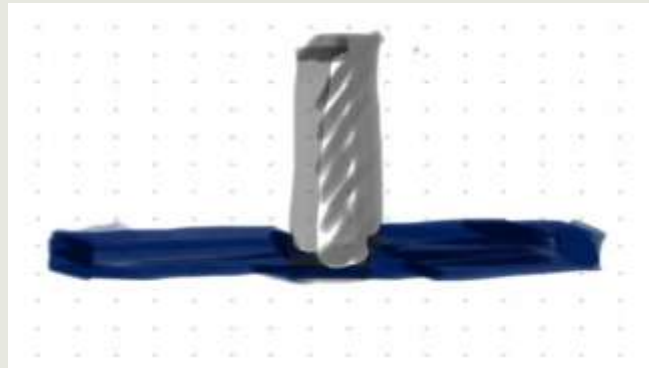

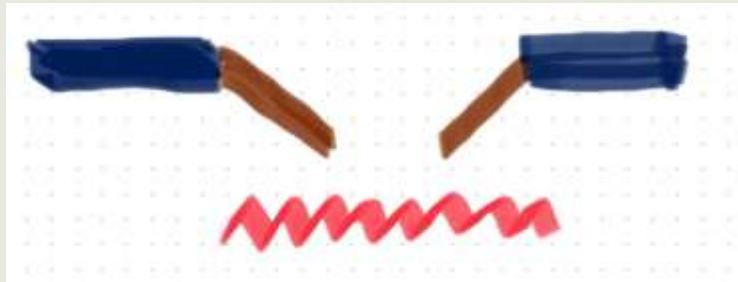

Player can switch between the past and the present, below are three primitive elements

Bridge

Wall

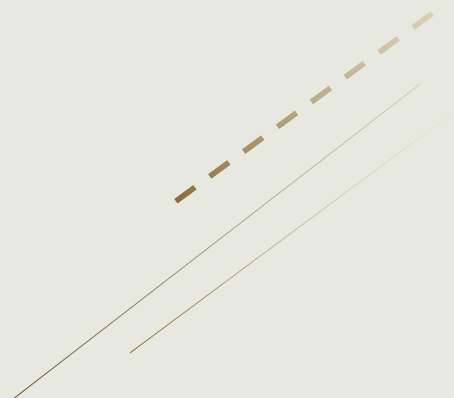

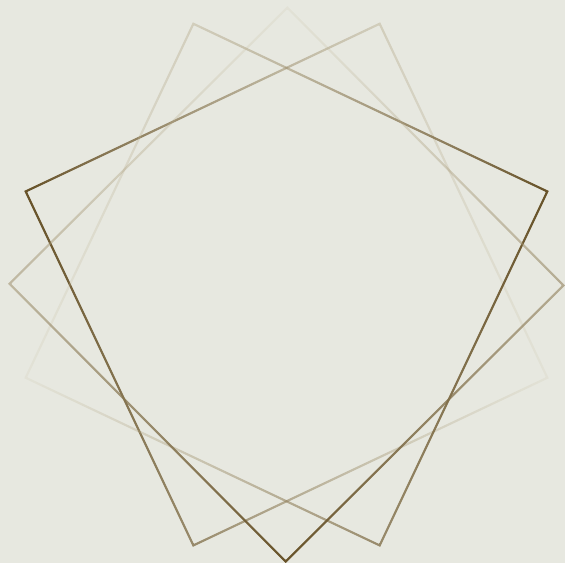

Meadow

Present

Past

Difficulties

How To complete?

Core Idea

One level, two aligned map states: Past and Present

Player builds the path in the past and uses it in the present

This is state switching, not full time-travel simulation

Main Challenges

Collision conflicts when switching states

Box transformation across two states

Clear visual difference between Past and Present

Extra scene-building workload

Our Solutions

Switch only at special time wells

Use two map roots: PastRoot / PresentRoot

Sync only key puzzle results, not full physics history

Reuse one forest tileset and separate states by color + damage + overgrowth

Double Time

```
public sealed class TimeStateObject : MonoBehaviour
{
    [SerializeField] private TimeState visibleInState;
    [SerializeField] private Collider2D[] collidersToToggle;
    [SerializeField] private Renderer[] renderersToToggle;

    public void Apply(TimeState state)
    {
        bool active = state == visibleInState;

        for (int i = 0; i < collidersToToggle.Length; i++)
        {
            collidersToToggle[i].enabled = active;
        }

        for (int i = 0; i < renderersToToggle.Length; i++)
        {
            renderersToToggle[i].enabled = active;
        }
    }
}
```

Time Layer Manager

PastRoot / PresentRoot
switch map state
toggle renderer + collider
special transition wells
aligned level layout

The key focus of this section is that each wall toggles its visibility and collision based on the current tense.

Pushing Box

```
using UnityEngine;

public sealed class TimeBoxGoal : MonoBehaviour
{
    [SerializeField] private GameObject presentRuins;
    private bool solved;

    public void MarkSolved()
    {
        solved = true;
        presentRuins.SetActive(true);
    }

    public bool IsSolved()
    {
        return solved;
    }
}
```

Puzzle Object State
movable box
goal trigger
solved result sync
no full physics history

Now

- spikes
- anti-intuition examples
- box as key puzzle state
- ladder / route progression

Future

the same object can change meaning
mechanics can chain across one level
earlier actions can reshape later routes
the system supports deeper puzzle design without revealing every trick now

END
